PATH JoCo Web Site Requirements Notes

1. We need a smooth and easy path for committee chairs and other content providers to submit content for the web site that does not require technical acumen and reduces "back and forth" to get the content in the required form and structure to post it to the site in a timely manner.

    a. Changes to committee information
    b. New or updated services
    c. New events
    d. New news
    e. Success stories and interviews

2. The web site should serve as a point of contact from members of our community to PATH in order to:

    a. Subscribe to the mailing list to get periodic updates related to PATH activities, events, and news.
    b. Volunteer
    c. Tell PATH about some worthy news event
    d. Tell PATH about a new or changed service
    e. Reach out to ask for help?

3. We MAY SOMEDAY want to be able to accept donations through the web site to help support PATH.

4. When we get a request for subscription, we should verify the authenticity of the e-mail address (to avoid spoofing issues). This can be automated.

5. We expect that this will be a relatively low volume web site (less than 1,000 "hits" per day for example).

6. More "advanced" features like search can wait until later, but we should be able to support them when we feel the need.

7. Are we OK with pathjoco.org as the main URL? As Julie registered it this way, pathjoco.com will also work.

8. The "landing page" of the web site would be the What's Happening section (news and events).

A separate document describes the proposed overall structure of the web site.

A separate document describes the proposed content that would appear for each of the committee "cards" and services "cards" (for consistency / improved look), and data that would be captured in the forms for volunteers, news, and events.
